

# Lacks - SupplyWEB Demand Schedules

## 6.0 Demand

When a Lacks publishes routine demand (sent out every night), it is sent as a release. The release contains header information and schedules for various parts. Each schedule contains requirements for a specific part. Through SupplyWEB, Lacks facilities and Suppliers share the same view of the requirements.

Lacks will typically send Material Releases and not Shipping Schedules. Through SupplyWEB, Lacks facilities and Suppliers can also view the demand summary. The summary report shows demand for all parts going to a specific destination that is due to leave the Ship From within the next seven days.

The only two categories that are useful in the Demand menu are “Schedule” and “Demand Summary”. Lacks will not be using the Staged schedules or the PO system at this time.

## 6.1 Releases and Shipment Schedules

To view the Supplier’s demand that has been published to SupplyWEB, select the **Demand->Schedules** link from the navigator.

The release page will display all of the matching release/schedules from the

search, To view details for the selected release, click the eyeglass icon next to a “Schedule”. To view a list of all of the parts, click the (+) symbol next to the “Ship To” plant (at Lacks), as shown below. The list of all the parts that have demand will drop down. To return to the schedule screen for that part, click the applicable part.

Release/Schedule details are displayed with current outstanding requirements and, if available, the amount of satisfied demand. Additional detailed information is available by clicking the eyeglass icon next to a requirement.

The Date represents the date when the product should be at Lacks. Early shipments, with a maximum two weeks, are acceptable. Required quantity is the quantity required for the build at Lacks. Due quantity will typically be same as required quantity unless a partial shipment has been made to the same PO line in the past or if more parts are owed due to short shipment on the previous shipment.

Planned or Firm Order

PO & PO line

A shipper must be created only if the "Type" calls out as "Firm" release for a shipment. "Planning" releases must not be shipped. A Firm release will have a PO# and PO line associated to it.
